

Adaptations Collage (3-5)

Materials

Old magazines (nature magazines work very well)

Scissors

Glue

Construction paper

Magic markers

Procedure

Have students cut out photographs from magazines and glue them to the paper.

They should look for photos that illustrate certain adaptations that animals or plants have.

Using the magic markers, have them write in words to describe how the adaptations help the plants or animals survive.

*You may want to have students design their collages around certain habitats, such as ocean, rainforest, desert, etc.

Observations/ Questions for Discussion

What types of adaptations were the easiest to find and describe?

Did you find that animals and plants that live in the same area have the same types of adaptations?
